

# ClearSky Engineering

ClearSky Engineering delivers comprehensive air quality related environmental engineering services to regulatory agencies and industry clients. Our diverse range of scientific and engineering expertise is recognized nationally and produces premium quality studies and reports. Client service is a top priority focusing on a collaborative, transparent approach to our work. Contact us to discuss your air quality project needs.

We have completed a wide range of air quality projects for the private and public sectors. Our core areas of focus include:

- Air emission inventory development
- Greenhouse gas (GHG) verification audit services
- National Pollutant Release Inventory (NPRI) reporting
- Environmental software & database development
- Air permits & regulatory approvals
- Vehicle emission studies utilizing MOBILE6.2C & NONROAD models
- Marine emission analysis, ocean-going vessels
- Identification and analysis of emission control options
- Support for ERCB Oil & Gas Development Licence applications

For industry, projects have involved emission calculations, analysis of emission control strategies, and regulatory reporting and approvals.

Emission inventory studies for government agencies have involved development of database and software systems, inventories of regional and point, area and mobile emissions, and emissions forecasts.

Recent project work includes:

- ✓ Greenhouse Gas Verification Audits
- ✓ Chemical Industry Emission Benchmarking, Environment Canada
- ✓ MOBILE6.2C Model Updates
- ✓ National Marine Emission Inventory Tool, Environment Canada
- ✓ Emission Control Area Analysis for Marine Vessels, Transport Canada
- ✓ Off-Road Engine Fleet Characterization, Metro Vancouver
